# MIND IN CERAMICS

Con la mente en la cerámica es una filosofía de trabajo en la que la máxima es el respeto del material. Cuanto mayor es el poder de resolución, mayor es la definición de cada objeto, así es como en Newker hemos diseñado todos nuestros proyectos para huir de lo convencional y crear diseños llenos de carácter. Nuestra convicción por aportar las mejores soluciones a cada una de las necesidades es lo que nos ha permitido alcanzar una autenticidad duradera.

—

With the mind in the ceramics is a philosophy of work in which the maximum is the respect of the material. The greater the power of resolution, the greater the definition of each object, and this is how at Newker we have designed all our projects to escape from the conventional and create designs full of character. Our conviction to provide the best solutions to every need is what has allowed us to achieve lasting authenticity.

# MIND IN CERAMICS

La atracción por el pensamiento divergente nos ha llevado hasta el cuestionamiento de las raíces cerámicas de manera tan inspiradora y contagiosa.

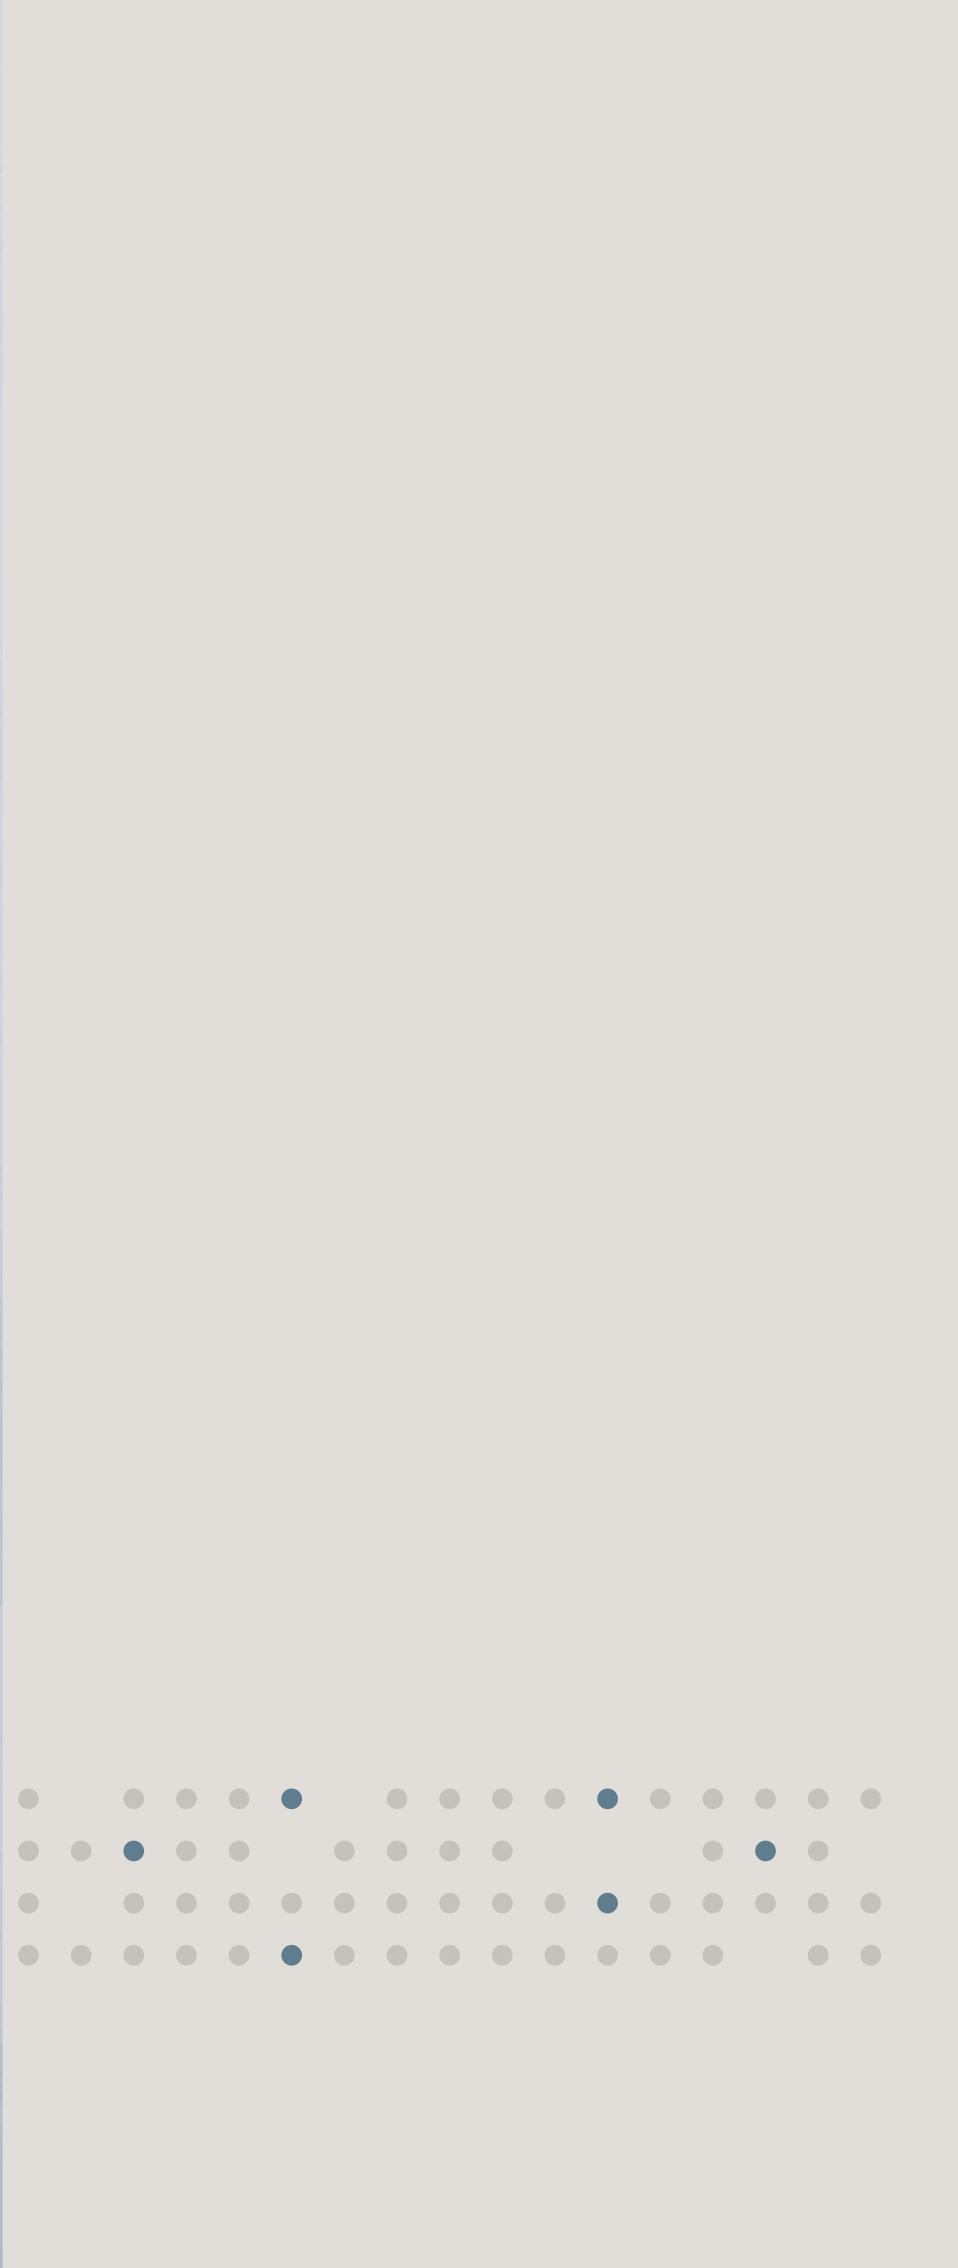

Esto nos permite huir de las modas pasajeras para apostar por la atemporalidad más atractiva. El camino correcto hacia la personalidad más persistente.

---

The attraction for divergent thinking has led us to question the ceramic roots in such an inspiring and contagious way.

This allows us to escape from passing fashions to bet on the most attractive timelessness. The right path to the most persistent personality.

SOFTGRIP es nuestro nuevo acabado que une las características técnicas de un Antideslizante con un tacto suave y agradable, por lo que es más fácil de limpiar que otro productos con las mismas propiedades

SOFTGRIP

SOFTGRIP is our new finish that combines the technical characteristics of an antislip tile with a soft and pleasant touch, making it easier to clean than other products with the same properties

\* Due to the special texture of this range, for installation, we recommend using the smallest possible amount of grout material, avoiding over grouting the piece, just the joint. The grout must be cleaned off the surface of the tile before it has dried, with a non-abrasive sponge, mild soap and water.

\* Debido a la especial textura de esta serie, para su colocación, recomendamos usar la menor cantidad posible de material de rejuntado, evitando esparcirlo sobre la pieza. El material de rejuntado debe ser limpiado de la superficie del azulejo antes de su secado, con una esponja no abrasiva, jabón neutro y agua.

\* Debido a la especial textura de esta serie, para su colocación, recomendamos usar la menor cantidad posible de material de rejuntado, evitando esparcirlo sobre la pieza. El material de rejuntado debe ser limpiado de la superficie del azulejo antes de su secado, con una esponja no abrasiva, jabón neutro y agua.

\* Due to the special texture of this range, for installation, we recommend using the smallest possible amount of grout material, avoiding over grouting the piece, just the joint. The grout must be cleaned off the surface of the tile before it has dried, with a non-abrasive sponge, mild soap and water.

# TILE-LAYING RECOMMENDATIONS

---

The correct installation and commissioning of a system of ceramic cladding is a process that involves all the professionals and processes involved in the project. In all cases it is necessary to read the manufacturers' recommendations, as well as the technical specifications of all the products and materials used.

These recommendations are based on the UNE 138002 Standard and are valid exclusively within the scope of application set forth therein. In any other case, refer to the prevailing regulations of each country.

In this section, we have compiled a brief summary of our tips. We recommend downloading the complete guide from our web site [http://bit.ly/NEWKER\\_recommendations](http://bit.ly/NEWKER_recommendations)

## PREPARATION OF THE BACKING SURFACES.

The backing surfaces on which the tiles are to be fitted must meet certain minimum technical parameters that ensure their compatibility with the ceramic tiles' materials and fitting techniques. For proper fittings, perform a diagnosis of the backing material and of the adaptation layers in accordance with section 6.1 of Standard UNE 138002.

It is important to respect the setting and maturing times of the backing material to avoid problems later on.

The installation surface must meet the requirements of section 6.3 of Standard UNE 138002 in terms of flatness, cohesion, water absorption, texture, chemical compatibility and the surface condition.

For installation by means of direct bonding with adhesives with all kinds of ceramic tiles, the deviation of the surface's flatness must be less than 3 mm measured over a distance of 2 m.

## GENERAL REQUIREMENTS FOR FITTING USING ADHESIVES.

- The backing and the surface to be fitted on must meet the requirements of previous paragraph.
- The layer of fixing material must be applied on the flat surface in a regular manner with a uniform thickness and flatness.
- The appropriate trowel must be selected according to the type of installation, the tile dimensions and the type of adhesive being used. In general, we will use trowels with teeth measuring between 8 and 10 mm.
- For unstable backing surfaces and large tile formats, we will select S1 or S2-type deformable adhesives.
- The adhesive must be protected from drying too quickly and from the presence of humidity.
- Tiles with a low water absorption capacity should not be allowed to get wet.
- The application must be carried out when the room temperature and that of the backing surface and the materials is between +5°C and +30°C, without strong winds or rain in the case of outdoor fittings.

## FITTING THE TILES.

- Before fitting the tiles, check the tonality, calibre and dimensions.
- Tiles should be placed with straight and regular joints between them.
- For large and rectangular formats, fitting against obstacles should be performed at a distance of 20% of the size of the piece or less and with an open joint of at least 3 mm.
- Within the adjustment time, it is recommended to lift one of the tiles to check if the required contact area is being achieved.
- The excess adhesive must be removed from the joints before it hardens to produce proper grouting.
- Protect the recently-installed ceramics from severe weather, frost and premature drying, as well as from any possible damages that subsequent works may cause.

## GROUTING

This must be carried out with materials developed specifically for this purpose, defined and classified in standard UNE EN 13888.

- Grouting should be carried out at least 24 hours after fitting. The pointing material should be applied in accordance with the manufacturer's
- In general, we will use a CG2-type pointing material.
- For cases in which a high mechanical resistance, sealing and chemical resistance are required, we will use RG1-type pointing material.
- The grout is to be spread using a suitable rubber trowel, filling the entire depth of the joints with diagonal movements.

# CONSEJOS DE COLOCACIÓN

---

La correcta instalación y puesta en obra de un sistema de revestimiento cerámico es un proceso que abarca todos los profesionales y procesos intervinientes en el proyecto. En todos los casos es necesario leer las recomendaciones de los fabricantes, las fichas técnicas de todos los productos y de los materiales utilizados.

Estas recomendaciones se basan en la norma UNE 138002 y son válidas exclusivamente en el ámbito de aplicación señalado por la misma. En cualquier otro caso, consulte con la normativa vigente de cada país.

En esta sección recopilamos un pequeño resumen de nuestros consejos, recomendamos descargar la guía completa a través de nuestra web:  
[http://bit.ly/NEWKER\\_recommendations](http://bit.ly/NEWKER_recommendations)

## PREPARACIÓN DE LOS SOPORTES DE COLOCACIÓN.

Los soportes deben cumplir unos parámetros técnicos mínimos que permitan su compatibilidad con los materiales y las técnicas de colocación de las baldosas cerámicas. Para la correcta colocación, realizar un diagnóstico del soporte y de las capas de adecuación según lo establecido en el apartado 6.1 de la Norma UNE138002.

Es importante, respetar los tiempos de fraguado y maduración de los soportes para evitar problemas posteriores.

La superficie de colocación debe cumplir los requisitos del apartado 6.3 de la Norma UNE 138002 en planitud, cohesión, absorción de agua, textura, compatibilidad química y estado de la superficie.

Para la colocación por adherencia directa con adhesivos con todo tipo de baldosas cerámicas, la desviación de planitud superficial debe ser inferior a 3 mm medidos en regla de 2 m.

## REQUISITOS GENERALES PARA LA COLOCACIÓN CON ADHESIVOS.

- El soporte y la superficie de colocación deben cumplir los requisitos del apartado anterior. La capa del material de agarre se debe aplicar sobre la superficie plana de forma regular con un espesor y planitud uniformes.
- Se debe seleccionar la llana adecuada según el tipo de instalación, dimensiones de la baldosa y tipo de adhesivo a emplear. Generalmente utilizaremos llanas entre 8 y 10 mm de diente.
- Para soportes con inestabilidad y formatos de baldosa grandes, seleccionaremos adhesivos deformables tipo S1 o S2.
- El adhesivo debe ser protegido de un secado rápido y de presencia de humedad.
- Las baldosas con baja capacidad de absorción de agua no se deben humectar con agua.
- La aplicación se debe realizar cuando la temperatura ambiente, del soporte y la de los materiales se encuentran entre +5 °C y + 30 °C, sin vientos fuertes y sin lluvia en colocación de exterior.

## COLOCACIÓN DE LAS BALDOSAS.

- Antes de la colocación, verificar la tonalidad, calibre y dimensiones.
- Las baldosas deben colocarse con juntas rectas y regulares entre sí.
- Para formatos grandes y rectangulares, la colocación a traba se realizará a una distancia del 20% de pieza o inferior y con junta abierta a partir de 3 mm.
- Dentro del tiempo de ajuste se recomienda levantar alguna baldosa para comprobar si se está consiguiendo la superficie de contacto requerida.
- Se debe eliminar el adhesivo sobrante de las juntas antes de que endurezca para un correcto rejuntado.
- Proteger el acabado cerámico recién instalado, de las inclemencias del tiempo, heladas y secado prematuro, y de posibles daños que puedan causar los trabajos posteriores.

## REJUNTADO.

Se debe realizar con materiales desarrollados específicamente para esta finalidad definidos y clasificados en la norma UNE EN 13888.

- El rejuntado se realizará transcurridas al menos 24 horas desde la colocación.
- La aplicación del material de rejuntado se realizará según las instrucciones del fabricante.
- Generalmente utilizaremos un material de rejuntado tipo CG2.
- Para casos en los que se requiera alta resistencia mecánica, estanqueidad y resistencia química utilizaremos
- Se extenderá la pasta de rejuntado utilizando una llana de goma adecuada rellenando las juntas en todas su profundidad con movimientos diagonales.
