Le collezioni Cisa Ceramiche rappresentano una perfetta sintesi tra **funzionalità, accoglienza e sicurezza**, il risultato è un ricco catalogo di superfici, **dai grandi formati alle piccole e preziose dimensioni, materiali innovativi e di grande resistenza destinati a durare nel tempo.**

The ceramic tile collections by Cisa Ceramiche are a perfect blend of **functionality, cosiness and reliability**. The result is a catalogue with a wealth of different surfaces, **from large formats to smaller and more delicate dimensions, innovative, highly resistant materials to last over time.**

Les collections céramiques Cisa Ceramiche représentent une parfaite synthèse entre **fonctionnalité, accueil et sécurité**. Le résultat est un riche catalogue de surfaces : **des grands formats aux dimensions petites et précieuses tout en passant par des matériaux novateurs et de grande résistance destinés à durer dans le temps.**

Die Keramikkollektionen von Cisa Ceramiche stellen eine perfekte Kombination zwischen **Zweckmäßigkeit, Behaglichkeit und Sicherheit** dar. Das Ergebnis ist ein umfangreicher Oberflächenkatalog, **von den Großformaten bis hin zu edleren kleinen Abmessungen – innovative, extrem widerstandsfähige Materialien, die für eine lange Lebensdauer bestimmt sind.**

Функциональность и уют: надежный выбор.
Коллекции производства Cisa Ceramiche - это идеальный синтез функциональности, уюта и надежности, результатом которого является широкая гамма облицовочной плитки, богато представленной в каталоге, от крупных до малых и драгоценных форматов, из инновационных материалов, очень прочная и долговечная.

Introduction of digital decoration technology.
Introduction de la technologie de décoration numérique.
Einführung der digitalen Dekorationstechnologie.
Внедрение технологии цифрового декорирования.

2011

2011 Internalizzazione di tutte le operazioni di finitura (taglio, rettifica, lappatura).

All finishing operations (cutting, rectifying, lapping) carried out in-house.
Internalisation de toutes les opérations de finition (coupe, rectification, rodage).
Ausführung aller Endbearbeitungen (Schneiden, Schleifen, Läppen) im Werk.
Перевод на инсорсинг всех отделочных операций (обрезка, ректификация, лапатирование).

2018 QuattroR SGR S.p.A. acquisisce la quota di maggioranza di gruppo Ceramiche Ricchetti.

QuattroR SGR S.p.A. acquires a controlling interest in Gruppo Ceramiche Ricchetti.
QuattroR SGR S.p.A. acquiert la participation majoritaire du Gruppo Ceramiche Ricchetti.
QuattroR SGR S.p.A. erwirbt die Mehrheit an der Unternehmensgruppe Ceramiche Ricchetti.
Компания QuattroR SGR S.p.A. приобретает мажоритарную квоту группы Gruppo Ceramiche Ricchetti.

2018

2018 Tecnologia T2D, con l'acquisto della stampante "CreaDigit" - System e introduzione formato 120x120.

T2D technology, with the purchase of the "CreaDigit" - System printer and introduction of the 120x120 size.
Technologie T2D, avec l'acquisition de l'imprimante "CreaDigit" - System et introduction du format 120x120.
T2D-Technologie, mit dem Kauf des Druckers „CreaDigit“ - System und Einführung des Formats 120x120.
Внедрение технологии T2D с приобретением печатного станка "CreaDigit" - System и внедрение формата 120x120.

The future stems from the present.

Il futuro nasce dal presente.

Fin dalla sua costituzione, Cisa Ceramiche ha sempre voluto fortemente coniugare il proprio sviluppo industriale alla sostenibilità, attuando la filosofia di ridurre al minimo l'impatto ambientale, attraverso lo studio di prodotti ecocompatibili e attuando processi produttivi ecosostenibili, grazie, ad esempio, ad una politica di investimenti volta al controllo e all'abbattimento delle emissioni, l'utilizzo di materie prime a basso impatto ambientale, l'impiego di gas naturale e di impianti che consentono il recupero di energia e il riciclo degli scarti di produzione. Le importanti certificazioni e i riconoscimenti ottenuti a livello mondiale sono la testimonianza concreta di questo impegno.

Since its foundation, Cisa Ceramiche has strived to align its industrial development with sustainable values. It has done so by adopting the philosophy to minimise the environmental impact of its products through research to make them environmentally compatible, and by implementing environmental sustainable production processes. This was made possible, for example, by an investment policy aimed at controlling and reducing the CO2 emissions, the use of raw materials with a low environmental impact, the use of natural gas and systems that allow energy recovery and the recycling of production waste. The important certifications and acknowledgements obtained at global level are tangible proof of this commitment.

Dès sa constitution, Cisa Ceramiche a toujours voulu allier intensément son développement industriel à la durabilité en mettant en place, d'une part, une philosophie consistant à réduire au minimum l'impact environnemental, à travers l'étude de produits écocompatibles et, d'autre part, des processus productifs écodorables grâce, par exemple, à une politique d'investissement orientée vers le contrôle et l'abatement des émissions, l'utilisation de matières premières à impact environnemental réduit et l'utilisation de gaz naturel et d'installations qui permettent la récupération d'énergie et le recyclage des déchets de production. Les certifications importantes et les reconnaissances obtenues au niveau mondial sont le témoignage concret de cet engagement.

Seit der Gründung war eine industrielle Entwicklung im Einklang mit der Nachhaltigkeit für Cisa Ceramiche von grundlegender Bedeutung. Wir folgen daher der Philosophie, die Umweltbelastung anhand der Entwicklung von umweltverträglichen Produkten und der Verwendung von umweltschonenden Prozessen auf ein Mindestmaß zu senken. Dies gelingt zum Beispiel dank einer Investitionspolitik mit dem Ziel, die Emissionen zu kontrollieren und zu senken, der Verwendung von umweltschonenden Rohstoffen, des Einsatzes von Erdgas und von Anlagen, die die Rückgewinnung der Energie und die Wiederverwendung der Produktionsabfälle ermöglichen. Die bedeutenden auf weltweiter Ebene erhaltenen Zertifizierungen und Anerkennungen sind ein konkreter Beweis für diesen Einsatz.

Будущее рождается в настоящем. С момента своего создания компания Cisa Ceramiche всегда стремилась в ходе своего развития ответственно относиться к экологии, применяя политику, направленную на сокращение воздействия на окружающую среду, посредством разработки экологически совместимой продукции и производственных процессов; в частности, например, это политика капиталовложений, направленная на сокращение и контроль выборов в атмосферу, использование сырья с низким воздействием на экологию, использование природного газа, а также систем, позволяющих осуществлять рекуперацию энергии и отходов. Конкретным свидетельством этого обязательства являются многочисленные международные сертификаты и награды.

Riciclo degli scarti crudi

Recycling of raw waste
Recyclage des déchets crus
Wiederverwertung der rohen Abfälle
Переработка необожженных отходов

Skylab presenta superfici dalle pregiate caratteristiche di lucentezza e morbidezza al tatto grazie a una levigatura a campo pieno realizzata con le più avanzate tecnologie produttive. Come nel caso di pietre e marmi levigati, la sporadica presenza di piccole disuniformità o di puntini nella superficie è assolutamente da intendersi come una caratteristica del materiale che ne testimonia l'autenticità. Le lastre Skylab sono sensibili ad elementi particolarmente abrasivi e consigliamo di utilizzarle in rivestimenti e pavimenti poco sollecitati e non a diretto contatto con aree esterne in cui sono necessarie prestazioni antiscivolo.

Skylab presents a range of surfaces with outstanding shine and softness to the touch thanks to the full-field polishing performed using state-of-the-art production technologies. As with polished stone and marble, the sporadic presence of small dots or unevenness in the surface should be considered a natural characteristic of the material which reflects its authenticity. Excessive abrasiveness may damage Skylab tiles. We therefore recommend that they are used for low-traffic surfaces and flooring and not in direct contact with outside areas where non-slip performance is required.

Skylab propose des surfaces aux propriétés précieuses de brillance et de douceur au toucher grâce à un polissage par meulage des surfaces réalisé à l'aide des technologies de production les plus avancées. À l'instar des pierres et des marbres polis, la présence de quelques défauts d'uniformité ou de petits points sur la surface doit nécessairement être interprétée comme une caractéristique du matériau qui témoigne de son authenticité. Les plaques Skylab sont sensibles aux éléments particulièrement abrasifs. Nous vous recommandons de les utiliser pour des revêtements et des sols peu sollicités, non pas en contact direct avec des zones extérieures qui nécessitent des propriétés antidérapantes.

Skylab präsentiert Flächen mit wertvollen Eigenschaften hinsichtlich Glanz und weicher Haptik, dank einer mit den modernsten Fertigungsverfahren ausgeführten ganzflächigen Politur. Wie bei Stein und poliertem Marmor der Fall ist, sollten kleine, oberflächliche Ungleichmäßigkeiten oder Punkte als Merkmale des Materials betrachtet werden, die von seiner Authentizität zeugen. Skylab-Platten sind anfällig auf stark scheuerndes Material und wir empfehlen ein Verlegen auf wenig belasteten Untergründen und Böden, die nicht mit Außenbereichen in Kontakt stehen und keine rutschfesten Eigenschaften aufweisen müssen.

Skylab придает поверхностям благородный блеск и мягкость на ощупь благодаря полировке по всей поверхности, выполненной с использованием самых передовых производственных технологий. Как и в случае полированного камня и мрамора, sporadическое наличие маленьких неоднородностей или точек на поверхности является характеристикой материала, которая свидетельствует о его подлинности. Плитка Skylab чувствительна к особо абразивным элементам, поэтому мы советуем использовать ее для облицовки стен и пола, которые не слишком интенсивно эксплуатируются и не находятся в непосредственном контакте с наружными зонами, в которых плитка должна иметь противоскользящие свойства.

CERTIFICAZIONI / CERTIFICATIONS

Certifications / Zertifizierungen / Сертификация

Il sistema Qualità di CISA, certificato secondo UNI EN ISO 9001, è la norma internazionale che garantisce la qualità del sistema aziendale a tutti i livelli e in tutta la sua organizzazione: a livello progettuale, produttivo, commerciale e distributivo.

The Quality System at CISA is certified to UNI EN ISO 9001, the international standard which guarantees quality in company methods at all levels and throughout the entire company structure: regarding design, production, marketing and distribution.

Le système CISA de certification UNI EN ISO 9001, est la norme internationale garantissant la qualité d'une entreprise à tous les niveaux de son organisation : étude, production, commercialisation et distribution.

Das Qualitätssystem von CISA, das nach UNI EN ISO 9001 zertifiziert worden ist, folgt der internationalen Norm, die die Betriebsqualität auf allen Ebenen und in jeder Hinsicht garantiert: im Verkauf und Vertrieb.

Система менеджмента качества компании CISA сертифицирована по норме UNI EN ISO 9001. Эта международная норма гарантирует корпоративную систему менеджмента на всех уровнях и во всей организации: на проектном, производственном, коммерческом и дистрибутивном уровне.

Tra gli obiettivi prioritari dell'industria delle piastrelle ceramiche del comprensorio di Sassuolo-Maranello c'è la tutela dell'ambiente attraverso la continua valutazione degli impatti ambientali, al fine di perseguire il miglioramento continuo delle prestazioni ambientali e la prevenzione dell'inquinamento. Gruppo Ceramiche Ricchetti S.p.A. azienda leader nella produzione di piastrelle, ha da sempre fatto propri questi obiettivi ottenendo nel Luglio 2003 la relativa certificazione prevista dalla norma ISO 14001.

One of the top priorities of the ceramic tile industry in the Sassuolo-Maranello district is environmental protection, a goal we pursue through continual environmental impact assessment to reduce pollution problems. As a leading tile manufacturer, Gruppo Ceramiche Ricchetti S.p.A. has always pursued these objectives and in July 2003 obtained certification for the ISO 14001 standard in environmental management systems.

Parmi les objectifs prioritaires de l'industrie des carreaux céramiques de la zone Sassuolo-Maranello figure la sauvegarde de l'environnement. C'est en effet par l'évaluation permanente des impacts environnementaux que ce secteur cherche à réduire les problèmes de pollution. Gruppo Ceramiche Ricchetti S.p.A., chef de file dans la production de carreaux, s'est depuis toujours fixé ces objectifs et a obtenu en juillet 2003 la certification correspondante prévue par la norme ISO 14001.

Zu den wichtigsten Zielen der Keramikfliesen-Industrie des Bezirks Sassuolo-Maranello gehört der Umweltschutz durch die kontinuierliche Bewertung der Umweltauswirkungen, mit dem Zweck der Verbesserung der Umweltverschmutzungsprobleme. Gruppo Ceramiche Ricchetti S.p.A., ein Marktleader in der Produktion von Fliesen, hat sich diese Ziele schon immer zu Eigen gemacht und im Juli 2003 die entsprechende Zertifizierung der Norm ISO 14001 erhalten.

Среди приоритетных целей керамической промышленности региона Сассуоло-Маранелло - защита окружающей среды путем непрерывной оценки воздействия на окружающую среду с целью решения проблем загрязнения. Группа Ceramiche Ricchetti S.p.A., лидер в производстве керамической плитки, всегда тщательно относилась к этим задачам и в июле 2003 года прошла соответствующую сертификацию, предусмотренную нормой ISO 14001.

CERTIFICAZIONI / CERTIFICATIONS

Certifications / Zertifizierungen / Сертификация

CISA è membro del Green Building Council Italia, associazione che promuove la cultura dell'edilizia sostenibile energeticamente efficiente, rispettosa dell'ambiente contribuendo a migliorare la qualità della vita dei cittadini attraverso lo standard di certificazione Leed®.

CISA is a member of the Green Building Council Italia, an association that promotes sustainable energy-efficient building practices, which are environmentally friendly and help improve the quality of life through LEED® certification standards.

CISA est une membre du GBC Italia (Green Building Council Italia) qui est une association dont l'objectif est de favoriser et accélérer la diffusion d'une culture du bâtiment durable énergétiquement efficace, respectueuse de l'environnement, en sensibilisant l'opinion publique quant à son impact sur la qualité de la vie des citoyens, à travers du système de certification LEED®.

CISA, die Mitglied des Green Building Council Italien ist, ein Verband, der die Kultur des nachhaltigen und energieeffizienten, umweltverträglichen Bauens fördert, indem zur Lebensqualität der Mitmenschen durch die Zertifizierung nach den LEED®-Standards beigetragen wird.

Компания CISA является членом Green Building Council Italia - ассоциации, продвигающей культуру экологически рационального строительства, энергетически эффективного, уважающего окружающую среду, внося свой вклад в улучшение качества жизни граждан при помощи стандартов сертификации LEED®.

CERTIFICAZIONI / CERTIFICATIONS

Certifications / Zertifizierungen / Сертификация

L'Azienda assolve agli obblighi sulla marcatura CE. / The Company fulfils its CE marking obligations. Conformément aux dispositions en matière de marquage CE. / Die Firma erfüllt die Verpflichtungen für das CE-Kennzeichnung. / Компания выполняет обязательства по маркировке CE.

Certifica che le caratteristiche ambientali dei prodotti dichiarate dal fabbricante, Cisa, attraverso un'asserzione ambientale redatta nel rispetto dei requisiti della UNI EN ISO 14021:2016 e le relative metodologie di calcolo nonché i processi in atto per garantire il mantenimento delle stesse nel tempo, sono state verificate e trovate in accordo ai requisiti definiti nel documento di proprietà del fabbricante in materia di contenuto di materiale riciclato ai sensi del regolamento LEED e BREEAM.

CISA has received Bureau Veritas Certification product certification. This certification, recognised all over the world, involves the inspection and auditing of products, designs and systems, in relation to in-house standards and national and international compulsory and voluntary norms, to allow issue of a conformity report. All this creates value-added for the company by assisting it in risk management, control of the supply chain and the improvement of socio-economic results.

CISA a obtenu la Certification de produit Bureau Veritas Certification. Reconnue dans le monde entier, cette certification consiste à inspecter et à vérifier des produits, des projets et des systèmes par rapport à ses référentiels propres, à des normes obligatoires et volontaires, au niveau national et international, pour délivrer ensuite des rapports de conformité. Un support de la gestion des risques, du contrôle de la filière et de l'accroissement des résultats socio-économiques créent ainsi une valeur ajoutée pour l'entreprise.

CISA hat die Produktzertifizierung Bureau Veritas Certification erhalten. Diese Zertifizierung ist weltweit anerkannt und besteht in der Inspektion und Prüfung der Produkte, Projekte und Systeme bezüglich der Erfüllung unternehmensinterner Standards sowie nationaler und internationaler obligatorischer und freiwilliger Normen. Aufgrund eines Supports im Risikomanagement, der Lieferantenkontrolle und der Steigerung der sozialen und wirtschaftlichen Resultate handelt es sich für das Unternehmen um eine wertschöpfende Maßnahme.

CISA получила сертификат соответствия продукции в Бюро Веритас Сертификейшн. Этот сертификат признан во всем мире и заключается в инспекции и проверке продукции, проектов и систем на соответствие внутренним стандартам, обязательным и необязательным нормам на внутреннем и международном уровне с целью составления отчета о соответствии. Все это придает компании добавочную стоимость при помощи поддержки в управлении рисками, в управлении производственными процессами и в развитии социально-экономических результатов.

La certificazione CCC, introdotta nel 2002, interessa i prodotti che vengono esportati nel mercato Cinese. Le informazioni sulla certificazione CCC riguardano in generale la sicurezza e la salute, con particolare riferimento, nel caso delle piastrelle in ceramica, alle sole piastrelle in gres porcellanato, con un assorbimento uguale o minore dello 0,5%. La certificazione si ottiene attraverso appositi audit eseguiti da Istituti appositamente accreditati dalle autorità cinesi, tutti con sede in Cina.

Information concerning CCC certification generally relates to health and safety. In the case of ceramic tiles, reference is made specifically only to porcelain tiles having water absorption of 0.5% or less. Certification is obtained through institutions specifically accredited by the Chinese authorities, all based in China.

Les informations sur la certification CCC concernent en général la sécurité et la santé, avec une référence toute particulière, dans le cas des carreaux en céramique, uniquement aux carreaux en grès cérame, à absorption inférieure ou égale à 0,5%. On l'obtient par l'intermédiaire d'organismes de certification et d'accréditation chinois, tous avec siège en Chine.

Die Informationen über die CCC-Zertifizierung betreffen im Allgemeinen die Sicherheit und Gesundheit und im Bereich von Keramikfliesen insbesondere die Feinsteinzeugfliesen mit einer Wasseraufnahme kleiner oder gleich 0,5 %. Das Zertifizierungsverfahren erfolgt durch die von den chinesischen Behörden akkreditierten Stellen, die sämtlich ihren Geschäftssitz in China haben.

Информация о сертификации CCC касается в основном безопасности и здоровья, уделяя особенное внимание в случае с керамической плиткой, лишь только плитке из керамогранита с поглощением воды меньше или равным 0,5%. Сертификат получается через организации, специально аккредитованные китайскими властями, которые все находятся в Китае.

ASTM International è il più grande ente di normazione al mondo su base volontaria, ed è riconosciuto come fonte affidabile di norme tecniche su materiali, prodotti, sistemi e servizi. Note per la loro alta qualità tecnica ed attinenza al mercato, le norme ASTM rivestono un ruolo di primaria importanza all'interno della infrastruttura informativa che guida le attività di progettazione, costruzione e commerciali su scala mondiale.

ASTM International is the world's largest voluntary standards organisation, and is respected as a reliable source of technical standards on materials, products, systems and services. Known for their high technical quality and market-relevance, ASTM standards play a role of primary importance within the IT infrastructures that provide guidance for design, construction and commercial activities worldwide.

ASTM International est le plus grand organisme d'élaboration de normes volontaires au monde, reconnu comme une source fiable de normes techniques pour les matériaux, produits, systèmes et services. Connues pour leur haute qualité technique et leur pertinence sur le marché, les normes internationales ASTM jouent un rôle majeur dans l'infrastructure d'information qui guide les activités de conception, fabrication et de commerce à l'échelle mondiale.

Die ASTM International ist die größte Standardisierungsorganisation weltweit. Die Verwendung ihrer Standards ist freiwillig. Sie gilt als zuverlässige Quelle von technischen Normen für Materialien, Produkte, Systeme und Dienstleistungen. Die ASTM-Standards, bekannt wegen ihrer hohen technischen Qualität und Marktbezogenheit, spielen in der Informationsinfrastruktur, die den Entwicklungs-, Herstellungs- und Vertriebstätigkeiten in der ganzen Welt zugrunde liegt, eine erstrangige Rolle.

ASTM International - это самая большая в мире сертифицирующая организация добровольного характера. Она общепризнана как надежный источник технических норм по материалам, продукции, системам и услугам. Известные своим высоким качеством и связью с рынком, нормы ASTM играют первостепенную роль в информационной инфраструктуре, управляющей проектной, строительной и коммерческой деятельностью на мировом уровне.

PRODOTTI ANTISCIVOLO / NON-SLIP PRODUCT

Les produits antiglisse / Rutschsichere produkte / Противоскользкая продукция

BOT 3000 - Coefficiente di attrito dinamico (DCOF: Dinamic coefficient of friction)

Il metodo di prova BOT3000 prevede la misurazione del coefficiente di attrito dinamico di un pavimento in ceramica. La prova viene eseguita in condizioni di superficie bagnata in quattro direzioni ortogonali tra loro, utilizzando un sensore in gomma con caratteristiche normalizzate (ad esempio SBR). Come indicato nella Norma ANSI A137.1-2012 il coefficiente determinato deve essere maggiore di 0,42 per superfici per le quali sia prevista la possibilità di deambulazione sul bagnato.

BOT 3000 (AcuTest) - Dynamic coefficient of friction (DCOF)

The BOT3000 test method measures the dynamic coefficient of friction of a ceramic floor. The test is conducted on a wet surface in four orthogonal directions, using a rubber sensor with normalised characteristics (for example SBR).

As indicated in the ANSI A137.1-2012 standard, the code requires a minimum wet dynamic coefficient of friction (DCOF) of 0.42 for tiles in level interior spaces expected to be walked upon when wet.

BOT 3000 (AcuTest) - Dynamischer Reibungskoeffizient

(DCOF: Dynamic coefficient of friction)

Die Testmethode BOT3000 sieht die Messung des dynamischen Reibungskoeffizienten eines Keramikfußbodens vor. Der Test wird auf nasser Oberfläche in vier Richtungen, die im rechten Winkel zu einander stehen, mit Hilfe eines genormten Gummisensors (zum Beispiel SBR) durchgeführt. Laut Norm ANSI A137.1-2012 muss der ermittelte Koeffizient bei Oberflächen, auf denen die Möglichkeit besteht, dass sie im nassen Zustand betreten werden, über 0,42 liegen.

BOT 3000 (AcuTest) - Dynamischer Reibungskoeffizient

(DCOF: Dynamic coefficient of friction)

La méthode d'essai BOT3000 permet de mesurer le coefficient de frottement dynamique sur un sol en céramique. Le test est effectué sur une surface mouillée, en quatre directions orthogonales l'une par rapport à l'autre, à l'aide d'un capteur en caoutchouc présentant des caractéristiques normalisées (par exemple SBR). Comme l'indique la norme ANSI A137.1-2012, le coefficient déterminé doit être supérieur à 0,42 pour des sols sur lesquels il est prévu de marcher quand ils sont mouillés.

BOT 3000 – Динамический коэффициент трения скольжения (DCOF: Dynamic coefficient of friction).

Опытный метод BOT3000 предусматривает определение динамического коэффициента трения скольжения пола из керамической плитки. Испытание проводится в условиях влажной поверхности, в четырех ортогональных по отношению друг к другу направлениях, с использованием резинового датчика с нормализацией выходных сигналов (например, SBR).

Как указано в Норме ANSI A137.1-2012, определяемый коэффициент должен быть выше 0,42 для поверхностей, по которым предусматривается возможность передвижения людей при наличии влаги.

Un metodo semplice e significativo per definire il grado di compatibilità fra pavimento e destinazione d'uso, cioè fra pavimento e caratteristiche ambientali, è il "Classement UPEC", metodo francese costituito da una classificazione dei locali/edifici in relazione alla severità delle condizioni d'impiego e ai conseguenti livelli di prestazione richiesti alla pavimentazione, indicato dalle lettere: U = grado di resistenza all'usura e all'abrasione (indici da 1 a 4 con numero crescente in relazione alla maggiore resistenza). P = grado di resistenza meccanica (indici da 1 a 4 con numero crescente in relazione alla maggiore resistenza). E = comportamento dell'acqua (indici da 0 a 3 con numero crescente in relazione al miglior comportamento). C = comportamento ai prodotti chimici e alle macchie (indici da 0 a 3 con numero crescente in relazione alla maggiore resistenza ad acidi, basi e prodotti macchianti).

Une simple et significative méthode pour établir le degré de compatibilité entre sol et fonction installée, c'est-à-dire entre sol et caractéristiques du milieu ambiant est le "Classement UPEC", méthode française représentée par une classification des locaux et des établissements par rapport à la sévérité des conditions d'emploi et aux conséquents niveaux de performances nécessaires au pavage, comme suit: U = Degré de résistance à l'usure et à l'abrasion (indices de 1 à 4 avec numero croissant par rapport à la resistance majeure). P = Degré de resistance mecanica (indices de 1 à 4 avec numero croissant par rapport à la resistance majeure). E = Comportement de l'eau (indices de 0 a 3 avec numero croissant par rapport au meilleure comportement). C = Réaction aux produits chimiques et aux taches (indices de 0 à 3 avec numero croissant par rapport à la resistance majeure aux acides, bases et produits tachants).

CONSIGLI DI POSA E MANUTENZIONE

Prima di iniziare le operazioni di posa di una qualsiasi superficie si raccomanda di accertarsi che la partita di materiale sia adeguata e sufficiente per quantità, tono e calibro, a quella necessaria. Si dovranno poi seguire tutte le norme e le precauzioni che sono alla base di una corretta esecuzione del lavoro (preparazione del sottofondo, composizione della malta o dei collanti, rispetto dei tempi di essicazione, posizionamento dei giunti di dilatazione, battitura, ecc. ...)

POSA CON ADESIVI

La posa deve essere effettuata da personale qualificato con l’ausilio di attrezzi adeguati. La superficie su cui si effettua la posa (massetto) deve essere perfettamente piana. Valore massimo consigliato non superiore a 3mm. per un dislivello determinato sotto un regolo di 2m. La superficie su cui si effettua la posa deve essere ben stagionata, priva di polvere e di fessurazioni visibili. Durante l’operazione di posa è vivamente consigliato l’utilizzo di un’adeguata illuminazione. La scelta dell’adesivo è condizionata dalla tipologia delle piastrelle (gruppo di appartenenza e formato), dal tipo di superficie da rivestire e dalla sua destinazione d’uso. E’ opportuno verificare la posa del materiale prima che il collante sia secco, per facilitare eventuali correzioni.

POSA CON MALTA FRESCA

La posa a malta cementizia fresca o “strato spesso” è sconsigliata per formati aventi lato > 30 cm e con supporti non assorbenti.

SISTEMA AUTOLIVELLANTE PER FACILITARE LA POSA DI LASTRE GRANDE FORMATO

Le piastrelle di grande formato (80x180, 80x80, 60x120 e tutti i relativi sotto formati) prodotte nei nostri stabilimenti presentano caratteristiche di elasticità e flessibilità che consentono di raggiungere, una volta effettuata la posa, la massima aderenza al massetto. Questo avviene anche in presenza di un minimo grado di convessità; la lastra infatti si autolivella adagiandosi sotto il proprio peso e raggiunge una planarità perfetta. Per facilitare ulteriormente la posa è consigliabile utilizzare distanziatori autolivellanti. Spesso, a causa di supporti (caldane) non perfettamente livellati, piastrelle di basso spessore e quindi flessibili o piastrelle di grande formato e quindi pesanti anche prestando la massima attenzione non si riescono a collocare in maniera ottimale. Come risultato, piastrelle che in fase di posa appaivano perfettamente livellate, a presa avvenuta dell’adesivo presentano invece dislivelli che ne compromettono l’estetica. Tutto ciò si può evitare grazie all’impiego di distanziatori livellanti che, oltre a mantenere il perfetto livellamento tra le piastrelle, velocizzano la posa. Con i distanziatori livellanti la posa è facile, veloce e le piastrelle restano perfettamente livellate.

REALIZZAZIONE DEI GIUNTI

I giunti sono elementi molto importanti per il mantenimento di una buona superficie piastrellata e si consiglia di avvalersi della collaborazione e/o consulenza di un posatore professionista. Si declina ogni responsabilità per la posa senza fuga; si considera posa a “giunto minimo” quella con fuga a 2 mm. I giunti devono essere posizionati:
-su raccordi strutturali (giunti strutturali)
- tra suolo e parete (giunti perimetrali)
- tra una piastrella e l’altra (giunti di posa o fuga)
- tra piastrelle ed altri materiali (es. accostamento ceramica / linoleum /legno)

STUCCATURA SUPERFICIE POSATA

Prima di realizzare le fughe è consigliabile attendere fino a completa asciugatura del collante e assicurarsi che i giunti di posa siano vuoti e liberi da ogni traccia di collante e/o polveri. Stuccare piccole superfici per volta (4-5 mq). Questo è da tenere in particolare considerazione per prodotti strutturati, antiscivolo e levigati. Eliminare l’eccesso di fugante dalla superficie con movimenti diagonali quando il prodotto è ancora umido e togliere tutti i residui, in particolar modo per le superfici da esterno. Pulire accuratamente con una spugna

bagnata in acqua limpida e pulita e ripassare con straccio umido su tutta la superficie fughe comprese. Per fughe in netto contrasto cromatico con le piastrelle posate è consigliabile testare il fugante su un’ area circoscritta e nascosta. Per gli stucchi epossidici si raccomanda la pulizia con spugna e abbondante acqua. La velocità di reazione e indurimento di questi prodotti rende impossibile la rimozione dei residui successivamente all’indurimento. Il giorno dopo la stuccatura effettuare una pulizia completa con detergente alcalino. Si consiglia di, consultare i produttori di materiale fugante per verificare la scelta corretta della fuga rispetto al tipo di piastrella.

PULIZIA E MANUTENZIONE DOPO LA POSA

Un cantiere si può considerare completamente finito quando è sgombro da qualunque utensile/ materiale derivante dalle lavorazioni. Per ridurre i rischi di danneggiamento della superficie piastrellata, è necessario proteggerla ed evitare il più possibile la presenza di materiali abrasivi (polveri o residui da lavorazioni successive).

PULIZIA INIZIALE

Il lavaggio dopo la posa è un una fase di fondamentale importanza per tutti gli interventi successivi e per una corretta manutenzione. Un accurato lavaggio iniziale permette ai pavimenti di restare belli e protetti a lungo e si esegue normalmente una sola volta prima dell’utilizzo del pavimento. Si raccomanda di effettuare la pulizia iniziale dopo 4-5 giorni e non più tardi di 10 dalla posa e stuccatura della superficie. La superficie fugata e pulita può presentare un film di residui cementizi che non sono asportabili con sola acqua per cui si rende necessario l’utilizzo di un prodotto a base acida, opportunamente diluito (diluizione da 1:10 a 1:4 in acqua fredda), in base a quanto dichiarato dal produttore. La prima operazione da eseguire è quella di bagnare la superficie piastrellata ed in particolare le fughe (di norma non resistenti agli acidi). Spargere la soluzione acida preparata e lasciare agire per un breve tempo (2 min). Non lasciare asciugare il prodotto applicato. Procedere alla rimozione della soluzione aiutandosi con una macchina monospazzola (disco non abrasivo), aspiraliquidi, altri mezzi e/o manualmente e alla fine risciacquare abbondantemente. E’ importante sottolineare che la pulizia eseguita con macchine (particolarmente consigliata per prodotti strutturati e per grandi superfici), va sempre completata manualmente nei punti difficilmente raggiungibili, soprattutto negli angoli, lungo le pareti dei locali e in ogni zona in cui la monospazzola non può operare. E’ sempre consigliabile testare la resistenza del prodotto agli acidi su un pezzo non posato o su una piccola porzione nascosta della superficie piastrellata; in particolare per prodotti lappati o levigati. t: uso di prodotti di pulizia contenenti acido fluoridrico (HF) e suoi derivati sono da evitare.

PULIZIA ORDINARIA

Gli interventi di pulizia ordinaria delle superfici hanno lo scopo di rimuovere lo sporco, cancellare i segni e ripristinare l’aspetto originale. Le piastrelle in gres porcellanato smaltato non necessitano di trattamenti di protezione e una corretta e sistematica pulizia è sufficiente a mantenere inalterata la superficie. Un’accurata pulizia deve essere fatta con un normale lavaggio con acqua calda, straccio l spugna morbida ed eventualmente con l’utilizzo di detergenti neutri. Per locali con grandi superfici possono essere utilizzate macchine industriali lavasciuga con completamento manuale dove necessario.

RACCOMANDAZIONI:

- evitare di strofinare le superfici con strumenti abrasivi, come pagliette in metallo o spazzole dure, che potrebbero lasciare graffi e segni indelebili;
- rimuovere eventuali residui grassi o oleosi con detergenti contenenti solventi organici o con detergenti alcalini (pH>9) e fare seguire un accurato risciacquo;
- evitare l'utilizzo di saponi in quanto tendono a lasciare uno strato viscido, in particolare se utilizzati in abbinamento ad acque dure;
- non utilizzare prodotti contenenti cere o brillantanti;
- evitare l’uso di detergenti abrasivi su superfici lucide, levigate e metallizzate; possono essere utilizzati su materiali matt., previa verifica su una piccola porzione piastrellata. In generale l’uso di qualunque detergente non neutro, deve essere preliminarmente testato su una piastrella non posata o su una porzione nascosta della pavimentazione.

LAYING AND MAINTENANCE TIPS

Before laying on any surface, make sure that the material is appropriate and sufficient in terms of quantity, shade, and work size to suit the laying needs. All regulations and precautions concerning the correct execution of the works must be followed (preparing the bed, grout or adhesive composition, drying times, position of the expansion joints, tapping into place, etc... ..)

LAYING WITH ADHESIVES

Laying must be carried out by experienced staff using appropriate equipment. The surface to be laid (screed) must be perfectly level. Maximum difference in depth: no more than 3 mm over an uneven section measured with a ruler 2 m long. The surface to be laid must be well set, dust-free and with no visible cracks. During laying, the use of appropriate lighting is strongly recommended. The choice of adhesive depends on the tile (type and size), the type of surface on which the tiles are to be laid, and the intended use. Check that the tiles are laid correctly before the adhesive dries in order to facilitate any corrections required.

LAYING WITH FRESH MORTAR

Laying with fresh cement-based mortar or thick layers is not recommended for sizes over 30 cm long and on non-absorbent screeds.

SELF-LEVELLING SYSTEM TO FACILITATE THE LAYING OF LARGE FORMAT TILES

Large format tiles (80x180, 80x80, 60x120 and all related sub-formats) produced in our facilities, demonstrate characteristics of elasticity and flexibility which, once laid in position, achieve maximum adhesion to the screed. This is possible even where there is a slight degree of convexity; the tile, in fact, self-levels settling under its own weight to reach a perfect flatness. To further ease installation, it is advisable to use self-levelling spacers. Often, due to imperfectly levelled supports (laying bed) it is impossible to perfectly position tiles which are thin, and therefore, flexible or large format tiles which are heavy, even when maximum care is taken. As a result, tiles which appear perfectly levelled during installation, are uneven once the adhesive hardens, compromising their aesthetic appearance. All of this can be avoided thanks to the use of levelling spacers which, in addition to maintaining the perfect levelling between the tiles, speeds up their installation. With levelling spacers, installation is easy, fast and the tiles remain perfectly levelled.

JOINTS

Joists are very important for ensuring the tiling lasts well and we recommended you seek help and/or advice from a professional layer. The company declines all responsibility for laying without joints; laying with ‘minimum’ joints means maintaining a gap of 2 mm. The joints must be positioned:
- on structural joints;
- between the floor and the wall (perimeter joints);
- between one tile and another (laying joints);
- between the tiles and other materials (e.g. combinations of ceramics/linoleum /wood).

GROUTING LAID SURFACES

Before grouting wait for the adhesive to dry completely and make sure that the laying joints are empty and free of all traces of adhesive and/or dust. Grout small areas at a time (4-5 m2). This is particularly important for textured, non-slip, and polished tiles. Remove excess grout from the tiles using diagonal movements when the product is still damp. Remove all residues, especially on outdoor surfaces. Clean carefully using a sponge dampened with clean, fresh water and then wipe off the whole surface, including the joints, with a damp cloth. When using grout with a strongly contrasting colour to the laid tiles, test it beforehand on a small, hidden area. When using epoxy grouts, clean with a sponge and plenty of water. The reaction and hardening times of these products make it impossible to remove any residues once they have hardened. The day after grouting, completely clean the surface with an alkaline detergent. Contact grout manufacturers to ensure you choose the right grout for the type of tile.

CLEANING AND MAINTENANCE AFTER LAYING

Work is deemed completely finished once the building site has been cleared of all tools and materials used during the operations. To reduce the risk of damaging tiled surfaces, cover the tiled area and keep away from abrasive materials (dust and residues from operations carried out after laying), as far as possible.

INITIAL CLEANING

Washing after laying is of fundamental importance to all operations carried out afterwards and to ensure correct maintenance. Careful initial cleaning keeps floors beautiful and protected for longer and is done once only before using the floor. Initial cleaning should be carried out 4-5 days after laying, and in any case no longer than 10 days after laying and grouting. The grouted and cleaned surface may have a concrete film which cannot be removed using water alone, and therefore an acid-based product, suitably diluted (from 1:10 to 1:4 in cold water) should be used, following the manufacturer’s instructions. The first operation is to wet the tiled surface and particularly the gaps (grout is not usually acid-resistant). Spread the prepared acid solution and leave for a short time (2 minutes). Do not allow the applied product to dry. Remove the solution using a brushing machine (with a single, non-abrasive disk), wet vac or other means and/or manually, then rinse well. It should be stressed that machine cleaning (which is particularly recommended for textured products and large surfaces) must always be completed by hand in tight corners, along walls and any spaces that the brushing machine cannot easily reach. It is always advisable to test the resistance of the product to acids on an unlaid tile or a small, hidden area of tiled surface, particularly for lapped or polished products. Cleaning products containing hydrofluoric acid (HF) or its derivatives must not be used.

ORDINARY CLEANING

Ordinary cleaning removes dirt and marks and restores the surface to its original appearance. Glazed porcelain stoneware tiles do not require protective treatment, and a thorough, systematic cleaning is sufficient to maintain the surface. Careful cleaning must be done with hot water, a cloth or soft sponge and, if required, neutral detergents. For large areas, industrial washing machines can be used, with completion by hand where required.

RECOMMENDATIONS:

Do not rub the surfaces using abrasive tools, such as metallic sponges or hard brushes, which could scratch them or leave permanent marks. Grease and oil residues must be removed using detergents containing organic or alkaline solvents (pH>9), followed by careful rinsing. Avoid the use of soap as this tends to leave a viscous layer, particularly when used with hard water. Do not use products containing wax or glossing agents. Do not use harsh detergents on glossy, polished, or metallic surfaces, although they may be used on matt materials, checking first on a small, hidden tiled area. Generally speaking, when using any non-neutral detergent, check it first on an unlaid tile or a small, hidden portion of the floor.
